## Exhibit A

The applicant proposes reducing the number of acres irrigated from 40 acres to 32 acres on the same place of use. This reduction in acres irrigated would increase the acre ft. per. acre from 4 acre ft. per acre to 5 acre ft. per acre without exceeding the 160 acre ft. per year allotted to this permit. The acreage would be reduced in a circular fashion such that the pivot was irrigating 32 acres rather than 42 acres.

The reason for this change is to make the irrigation more feasible in Amargosa Valley, Nevada. 4 acre ft. per acre per year is not sufficient to adequately irrigate alfalfa in the Amargosa Valley. By increasing the acre ft. per acre and reducing the acreage, the farm will be more successful without changing the amount of water used.
